More HTML Structure

Unordered List

 Will create the start of a list of items. Think of it like a shopping list of items!

```
<ul>
    <li> Apples </li>
    <li> Oranges </li>
    <li> Bananas</li>
</ul>
```

This starts the list

This creates a list item!

This creates a list item!

This creates a list item!

This ends the list

Ordered Lists

Similar to unordered lists, ordered lists come with numbers to order them!

```
<ol>
    <li> First Step </li>
    <li> Second Step </li>
    <li> Third Step </li>
</ol>
```

Comments

Similar to Python and Java, we can write comments that do not show up on the
web page when loaded.

```
<!-- THIS IS A COMMENT -->
```

<!-- opens a comment

--> closes a comment

```
<!--
    THIS IS A COMMENT
    THIS IS A COMMENT
    THIS IS A COMMENT
-->
```

Lab

Create a tier list website.

- Create 3 tier lists
- List all items part of each tier list
- Then rank all items in order from highest to lowest
